

For health, relaxation and fun!

Mineral System

Video Orientation

START-UP (Fresh Fill)

- 1) Fill hot tub with hose placed in gray filter standpipe. Once filled, remove hose and install the **Mineral Cartridge** (per instructions) into same gray filter standpipe. Replace gray cap.
- 2) Turn power on to hot tub by switching breaker to on position in breaker panel. Note: Power supply should always be turned off to tub when draining or filling.
- 3) Push CLEAN button on hot tub control panel and add 1 capful of **SpaGuard Enhanced Shock** into filter area for every 250 gallons of water capacity.
- 4) Once the automatic CLEAN cycle has stopped (approx. 10 minutes), pour 4 oz of **Silk Balance** into filter area (jets OFF).
- 5) Unwrap and place **Scumbug** in filter compartment.
- 6) Start-up is now complete. Close and lock safety cover. Allow 12-24 hours for water to heat.

Well Water users may be required to bring sample water in for testing for a customized treatment routine

WEEKLY CARE

- 1) KEEP FILTERS CLEAN—Pumps work extra hard when dirty filters restrict water flow. Remove and clean filters with high pressure nozzle provided and replace.
- 2) Push CLEAN button, add 1 capful of **SpaGuard Enhanced Shock** into filter area for every 250 gallons of water capacity.
- 3) Once the automatic clean cycle has stopped (approx. 10 minutes), pour 4 oz of **Silk Balance** into filter area (jets OFF).

REGULAR CARE (as needed)

- 1) Every couple months, remove and soak filters in **SpaGuard Filter Cleaner** to remove oils and biofilm.
- 2) Every 1-4 months, clean & condition safety cover with **Cover Shield**.
- 3) Every 4-6 months replace **Scumbug** with new.
- 4) Every 4 months, remove and replace **Mineral Cartridge**.
