

For health, relaxation and fun!

Swim Spa System

Video Orientation

START-UP (Fresh Fill)

- 1) Fill Swim Spa to recommended level
- 2) Turn power on to Swim Spa by switching breaker to on position in breaker panel. Note: Power supply should always be turned off when draining or filling.
- 3) Turn jets ON then sprinkle 1 capful of **SpaGuard Chlorine Concentrate** over water surface for every 1000 gallons of water capacity. Allow water to circulate for at least 10 minutes.
- 4) With jets OFF, pour 4 oz of **Silk Balance** into filter area (jets OFF).
- 5) Unbox Mineral Cartridges and lay in filter basket. For swim spa models with two filter compartments, place one cartridge in each basket. (no more than two cartridges per filter basket)
- 6) Start-up is now complete. Close and lock safety cover. Allow 12-24 hours for water to heat.

Well Water users may be required to bring sample water in for testing for a customized treatment routine

WEEKLY CARE

- 1) KEEP FILTERS CLEAN—Pumps work extra hard when dirty filters restrict water flow. Remove and clean filters with high pressure nozzle provided and replace.
- 2) With jets ON, sprinkle 1 capful of **SpaGuard Chlorine Concentrate** over water surface for every 1000 gallons of water capacity.
- 3) With jets OFF, pour 4 oz of **Silk Balance** into filter area (jets OFF).
- 4) Using Test Strips provided, test water and adjust pH and Chlorine. Maintain a 1-5 ppm of Chlorine at all times.

REGULAR CARE (as needed)

- 1) Every couple months, remove and soak filters in **SpaGuard Filter Cleaner** to remove oils and biofilm.
- 2) Every 1-4 months, clean & condition safety cover per manufacturer instructions.
- 3) Every 4 months, remove and replace **Mineral Cartridge**.
